

Other Sites

Listed below are other sites in the Remedial Response Element where the necessary remedial work has been completed, the site is awaiting transfer outside of the Element, or the site is awaiting assignment within the Element based on its relative priority to other sites. These sites do not require full site descriptions; nevertheless, they are included here to be consistent with the “Known Contaminated Sites in New Jersey” report.

Brooks Avenue Ground Water Contamination Berkeley Township, Ocean County

Nine private potable wells in this area were determined to be contaminated with benzene and 1,2 dichloroethane in 1993. Berkeley Township subsequently extended water lines to the affected residences using Spill Fund money provided by NJDEP. NJDEP has identified a nearby gas station as a possible source of the ground water contamination at this site.

Gallagher’s Pizza and Deli Stillwater Township, Sussex County

A Point-of-Entry Treatment System was installed on an on-site contaminated potable well by the Remedial Response Element in 1992. This has since been removed and no further actions are planned.

Garrison Road Ground Water Contamination Vineland City, Cumberland County

Sixteen private potable wells in this area were determined to be contaminated with mercury and chlorinated volatile organic compounds in 1991. Vineland City subsequently extended public water lines to the affected residences using Spill Fund money provided by NJDEP. NJDEP has identified the Iceland Coin Laundry & Dry Cleaning facility as a possible source of the ground water contamination at this site.

Mosior Residence Bloomfield Township, Essex County

In 1992, gasoline vapors from the neighboring Semonian Service Station entered the basement of this residence. NJDEP’s Remedial Response Element installed a soil vapor extraction system (SVE) to prevent the vapors from entering the house. The SVE was shut down in 1996 when vapors could no longer be detected. The service station owner is addressing the soil and ground water contamination at his site under the supervision of NJDEP’s Responsible Party Remediation Element.

North West Avenue and Garden Road Ground Water Contamination Vineland City, Cumberland County

In the late 1980s, private potable wells in this area were determined to be contaminated with mercury at levels exceeding the New Jersey Drinking Water Standard. All residences in the area were connected to public water lines by 1990. NJDEP is periodically sampling other private potable wells in the immediate area to monitor the extent of the ground water plume.

Pineland Park Landfill Egg Harbor Township, Atlantic County

In the mid-1980s, private potable wells near this site were determined to be contaminated with several volatile organic compounds at levels exceeding New Jersey Drinking Water Standards. Residences in the area were subsequently connected to public water lines. NJDEP is periodically sampling other private potable wells in immediate area to monitor the extent of the ground water plume.

Silverton Ground Water Contamination Dover Township, Ocean County

This site is located in the Silverton section of Dover Township. In the early 1980s, private potable wells in the area of Hooper Avenue were determined to be contaminated with volatile organic compounds at levels exceeding New Jersey Drinking Water Standards. Residences in the area were subsequently connected to public water lines. NJDEP is periodically sampling other private potable wells in the immediate area to monitor the extent of the ground water plume.

**Stoningham Drive Ground Water Contamination
Warren Township, Somerset County**

Between 1988 and 1989 private potable wells at residences in this area were determined to be contaminated with volatile organic compounds at levels exceeding New Jersey Drinking Water Standards. The residences were subsequently connected to public water lines. NJDEP is periodically sampling other private potable wells in the immediate area to monitor the extent of the ground water plume. Additional investigative work is planned to identify possible sources of the ground water contamination.

**Stafford Township Landfill
Stafford Township, Ocean County**

This site is located in the Manahawkin section of Stafford Township. In the mid-1980s, private potable wells in this area were determined to be contaminated with several volatile organic compounds at levels exceeding New Jersey Drinking Water Standards. Residences in this area were subsequently connected to public water lines. NJDEP is periodically sampling other private potable wells in the immediate area to monitor the extent of the ground water plume.

**Upper Deerfield Township Sanitary Landfill Superfund Site
Upper Deerfield Township, Cumberland County**

NJDEP installed a water line in 1986 to address off-site ground water contamination from this site. USEPA issued a Record of Decision in 1991 for no further action based on the findings of a Remedial Investigation. However, work is still required under solid waste closure regulations and is being handled by NJDEP's Division of Solid Waste Management. The site was deleted from the National Priorities List of Superfund sites in 2000. The Township is conducting long-term monitoring of the ground water under an Administrative Consent Order with USEPA.

**Wildwood City Pump Station
Middle Township, Cape May County**

The contamination at this site resulted from an overturned fuel truck, which released 6,000 gallons of fuel oil at the well field in 1984. The Responsible Party conducted a \$1 million emergency response action to address the soil contamination. The potable supply well was taken out of service and replaced with another supply well at a new location. This site is awaiting assignment for investigation of any residual contamination.
